

This summit provides great resources for Tribes that have already deployed or are starting to deploy their networks. This conference provides the Tribal experts in an intimate setting allowing collaboration, questions and general conversations. This is the time to talk with peers that have first-hand insight and knowledge into what it takes to build infrastructure on Tribal lands.

Topics to think about, talk about and general conversation starters:

- 2.5 GHz Countdown, when did you get your license what is your plan to meet 50% deployment deadline?
- What solutions have been considered for 2.5 deployment? Any vendor recommendations?
- How are you planning CARES or ARPA connectivity solutions? Will they integrate with your NTIA grant project?
- What customer billing and service software are you using?
- How are you doing network management? Any recommendations?
- How did you value your tower space for colocation?
- What are the general fiber leasing rates? Based on what factors? Per mile?
- How many staff support your customers? How many technicians? How many customers?

The experts are in the room – use this setting to your advantage and feel comfortable asking. NTTA wants to see Tribes succeed and they have a long successful history of providing service to their territories and lands.
